

Welded Mesh Security Fencing

Safeguards Technology's **Welded Mesh Security Fencing** is perfectly suited to industrial, commercial and government applications which demand high security fencing in a non-lethal barrier design. Highly versatile and easy to maintain, Welded Mesh is one of the most widely used materials in many industries including corrections, utilities, airports, transportation, distribution, port authorities, and military facilities.

Safeguards Technology offers a variety of welded mesh sizes which are used for safety barriers, perimeter fencing and aesthetic purposes in commercial, industrial, military and government projects.

GENERAL USES

- Perimeters
- Bridge overpass fences
- Security fencing
- Catwalks and recreational enclosures
- Storage
- Balustrades

STI-Welded Mesh security fencing is the essential solution to hardening perimeters for property protection. It offers the benefits of masonry walls at or below the cost of other wire barriers.

With STI-Welded Mesh fencing you get a virtually impenetrable barrier that out lasts and out performs nearly all other fencing options. STI-Welded Mesh is available in a variety of mesh configurations thereby making it an aesthetically appealing choice for a wide variety of installations.

2.4 X 2.4 WELDED MESH

2.4 Welded Mesh features superior performance and is cost competitive to 2", 9-gauge chain link fence. In addition, because each individual wire is welded, the material is more difficult to climb and cut than chain link fence.

MOST POPULAR MESH SIZES

- 1/2" x 3" 8-gauge for highest security needs
- 2" x 2" 8-gauge for medium security needs
- 2.4" x 2.4" 9-gauge for basic perimeter requirements
