Shallow Mount Bollards

The Shallow Mount Bollard system meets the Department of State crash rating specifications. Unlike standard bollard-type perimeter installations where the need for at least 4 – 5 foot deep trenches, unwieldy form construction and laborious concrete pours create site disruptions; the shallow mount foundation system can be set in a 6 to 14 inch footing and can blend in nicely to any surrounding. Adding architectural fixtures such as benches, planters and other ornaments can create an aesthetically pleasing environment, while creating a force-protected perimeter for any asset.

Shallow Mount Bollards

FEATURES & BENEFITS

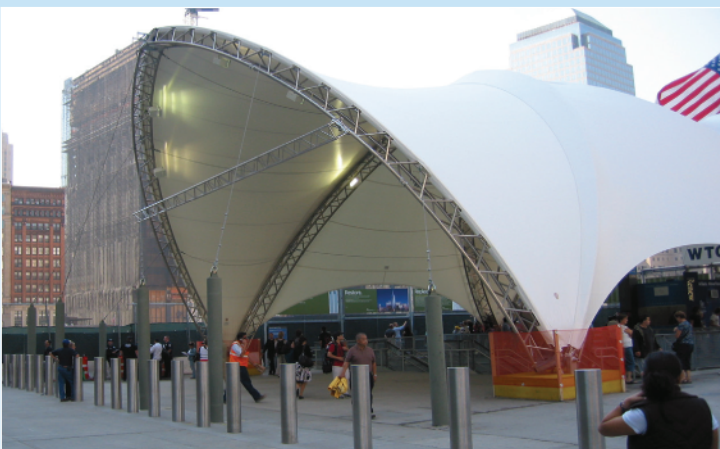

- Unmatched ease of installation
- Substantial cost saving over traditional bollards
- Maximum flexibility to meet a variety of applications
- Hardens a facility without making it look like a fortress
- Does not disturb underground utilities
- Dramatically reduced installation time

APPLICATION

The Shallow Mount Bollard system can easily be adapted to any facility or area that requires a formidable, visual, psychological and physical barrier.

SPECIFICATIONS

- Only 6 - 14" of excavation depth required
- Uses 75% less concrete compared with traditional bollards
- Pre-engineered modular solution
- Multiple covers to choose from
- Can integrate unique architectural elements
- Removable bollards also available
